

IFM Rigid 3V & 6V

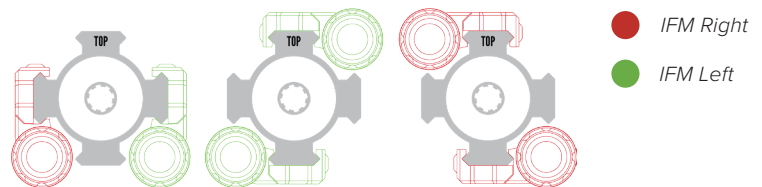

INTEGRATED FLASHLIGHT MOUNTS (IFM)

The IFM Rigid brings the flashlight into a fixed offset position and reduces the overall profile of the forward hand guard. Before there was an alternative, operators were encumbered with protruding lights, constant snagging, and at times the loss of equipment. S&S set out to eliminate those problems by tucking the flashlight up into the forward rail, providing the most streamlined location for tactical operations.

- Materials: 6061 aluminum
- Compatible with all SureFire® 3V and 6V components
- Left or right side rail grabbers available
- 3V available with or without SureFire® light
- Patent #: US 8727556

MOUNTING OPTIONS: The diagram below depicts the offset mount positions while facing the barrel of an unloaded weapon. The IFM Rigid can be mounted on the 12, 3, 6 and 9 o'clock positions.

Optional Surefire®
Remote Dual Switch

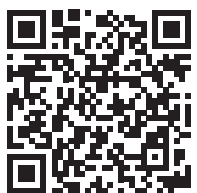

IFM RIGID 3V LEFT

IFM RIGID 6V RIGHT

Partnered with SureFire®, the IFM delivers a low profile offset position in a robust machined housing with the most advanced tactical lighting technology in the world.
