

Pack-M

The Pack-M is a lightweight, semi-rigid pack which has been carefully designed to accommodate a variety of user loadouts. Originally designed with the needs of JTACs/Comms users in mind, this pack is built to support heavy loadouts while attached to the user's plate carrier or on its own using the removable padded shoulder pads. This is a streamlined pack designed to carry the essentials while keeping rear-mounted equipment as clean and organized as possible. Cable ports at each shoulder and side of the torso allow for easy cable management and the integrated hydration sleeve removes the need for another standalone pouch. Despite its small package, the pack still features ample MOLLE/PALS space for attachment of any additional gear that the user may need. The Pack-M is configurable to almost every existing plate carrier system, but we have also incorporated S&S Precision's proprietary RAP system to allow for quick attachment to or removal from our PF-M.

- Streamlined multipurpose pack designed to maximize loadout on the user's plate carrier
- Capable of collapsing from a full 10L volume to a low-profile flat pack in seconds
- All-over laser-cut MOLLE/PALS allows for maximum loadout customization
- Will adapt to any user's application
 - Compatible with the S&S PF-M using its integrated Rapid Attachment Panel technology
 - Configurable to any MOLLE/PALS carrier using integrated MOLLE/PALS straps and hanging tabs
 - Assault-pack configuration allows for quick donning-doffing with removable side-release buckles
 - Removable padded shoulder straps with sternum strap allow for a standalone configuration
